Acknowledgments

This book is based on my doctoral dissertation. My greatest intellectual debt is to my mentor and advisor at Technische Universität München, Prof. Sophie Wolfrum, who guided me through her teaching and discussions, and whose careful readings and insightful criticism challenged and inspired me over the course of writing and revising. Her patience and tolerance created a free atmosphere of thinking and writing for me in this long intellectual journey. I would also like to thank the colleagues of Lehrstuhl für Städtebau und Regionalplanung who offered me much help and academic support for developing my research.

Many thanks to my old friends: Wang Daoseng, Li Zhigang, Yang Chen, Qin Yi, who either encouraged me to go through with the doctorate or provided insightful suggestions at various point along the way, and also to some new friends in Germany: Judy Wise Jones, Andrew Jones and Anna Mayr, who gave me, a non-native speaker, lots of precious suggestions on English and German language. Special thanks are due to my editor, Doctor Bettina Preiß. With her support, my work can finally “appear in public” and “can be seen and heard by everybody.”

Another man I would like to offer my appreciation to is Cui Jian, whose songs motivated me to face tough challenges, follow my own mind and keep walking.

I would like to express my gratitude to my parents and my mother-in-law, whose support was quite significant to me. My final and deepest appreciation is offered to my wife, Ji Yuzhong. Without her, I could not have accomplished the book.

Contents

Preface	9
Introduction	11
Chapter 1 · Meta-Spatial Publicness	19
1.1 · Hannah Arendt – The Agonistic Model of Public Spheres	20
1.2 · Jürgen Habermas – The Discursive Model of Public Sphere	22
1.3 · Richard Sennett – The Public Sphere as “Impersonal” Sphere	24
1.4 · Hans Paul Bahrdt – The Public Sphere as a Social System with Incomplete Integration	26
1.5 · Rosalyn Deutsche – The Public Sphere as a Debatable and Conflictual Sphere	28
1.6 · Defects in the Meta-Spatial Theories	30
Chapter 2 · Distance – Relation-Equilibrating	37
2.1 · The Production of Public Space	38
2.2 · Distance – A Prerequisite for Publicness	40
2.3 · The Spatial <i>Triad</i> of Distance	41
2.4 · Body – The Dividing Line	43
2.5 · Mask and Role	44
2.6 · The Institutionalization of Distance	47
2.7 · Disciplining Public Spaces	49
2.8 · Community – Institutionalized Collective Distance	51
2.9 · Complexity and Paradox in Distance	54
Chapter 3 · Representation – Meaning-Presenting	57
3.1 · Representation – The (<i>Re-</i>) Presentation of Meaning	58
3.2 · The Crisis of Representation in Architecture	61
3.3 · The Crisis of Representation in Politics and Art	64
3.4 · Total Mediations – Artistic Performance	67
3.5 · Spatial Performance – A Technique for Meaning-Presenting	69
3.6 · Presence and Atmosphere – The Lived Space	72
3.7 · Enabling Stage or Performative Kulturtechnik?	74
3.8 · <i>Consensus</i> and <i>Dissensus</i>	78

Chapter 4 · Genealogy of Shanghai's Social Spaces	83
4.1 · <i>Gemeinschaft</i> Versus <i>Gesellschaft</i>	84
4.2 · <i>Chaxugeju</i> , <i>Heyuanzhuzhai</i> and <i>Li-Fang</i>	88
4.3 · Early Citizenship, <i>Lilong</i> and Early Public Spaces	92
4.4 · Socialism, <i>Danwei</i> and <i>Gongren xincun</i>	97
4.5 · Social Segregation, MRD (Gated Community) and Informal Urbanism	103
4.6 · Community Gene with Public Potential	107
Chapter 5 · Spatial Publicness in Shanghai	111
5.1 · (Politically) Ritual Spaces	112
5.2 · Consumption Spaces	121
5.3 · Historical Symbolic Spaces	127
5.4 · Neighborhood Communal Spaces	134
5.5 · Parks and Green Spaces	142
5.6 · Metro Stations	148
5.7 · Public Reachability or Public Accessibility?	155
Chapter 6 · Aesthetics Dissensus	159
6.1 · Three Pairs of Paradoxes	160
6.2 · Critical Architecture Versus Projective Practices	162
6.3 · New Babylon and The Fun Palace	165
6.4 · Building Versus Edification or the Third Way?	169
6.5 · The Combination of Law and Freedom	174
6.6 · Mega-Structure or Mega-Form	180
Chapter 7 · Politics Dissensus	187
7.1 · Situationist International	188
7.2 · Tactics for Urbanism	189
7.3 · The Return of Distance Dimension	201
7.4 · Urban Staging	203
7.5 · Hospitable Practices and Urban Infill	211
Bibliography	219
List of Figures	229

Preface

The discourse on the urban publicness and public space might wane, were it not always possible to update it under new conditions. The rapidly transforming cities of China offer this discourse a contemporary field of empirical research and intellectual challenge. In this case, the discourse focuses on Shanghai, the hometown of the author. On the one hand, Chinese cities are integrated into a global network of city production and interpretation, while on the other, the specific conditions of China's urban society lead to the specific nature of urban spaces. *Investigation* – reconnaissance, research, exploration – describes the intellectual path of this book, an *intellectual journey*, in the course of which a theory of the character of public spaces in Shanghai develops. Various sociological theories are brought into play, and orientation is found in the company of – to name only the most important – Hannah Arendt, Rosalind Deutsche, and Jacques Rancière.

The author's intellectual background is that of an architect who is in on-going struggle over what position architecture can assume in this field of discourse, dominated as it is by the social sciences, in order to be able to act as an architect. Not least to withdraw from the common imputations of urban discourse on public space – defined types of urban space are usually ascribed established public functions – Shan Yang calls for a new terminology: *spatial publicness*. He thus lays a path through theoretical space. The usual radical polarity between the private and public sphere as a condition of urbanism and the city that characterizes Western urbanism is questioned from other cultural contexts than the European.

The concept of *spatial publicness* is theoretically established in the first part of the book, and applied to Shanghai in the second part. In the crucial final section, the role of architecture is questioned. A *Logical Diagram* supports the reasoning of the argument. This is not evident at first, but the reading of a very dense text is thus well guided. *The Logical Diagram* also allows a linear reading of the text or as a tableau of theories and reports on architectural practices in the light of *liminality, consensus/dissensus*. In particular, the dialectic between consent and dissent is expanded into a theoretical foundation.

A wealth of considerations is presented that relate not only to the specific case of Shanghai, but which significantly enrich the professional discourse on urban studies with regard to the relationship between the production of space and the public sphere. Shan Yang manages to carve out an independent position in the already crowded field of urban theory.

Sophie Wolfrum
München, March 2016

Introduction

This research investigates *Shanghai spatial publicness* by virtue of the theoretical reflection on the essence of public space, the empirical survey on social spaces in Shanghai, and the instantiative exploration of professional responses from architectural and urbanistic perspectives. The whole discussion pivots on a new concept “*spatial publicness*” that is deduced to overcome the defect of the conventional concept “public space”, when confronting the complexity, fluidness, and polysemy of contemporary urban phenomena. The new notion with its inherent nature of indeterminacy, instability, and temporariness can facilitate disclosing the vibrant but long-overlooked potential in Shanghai’s social space. Lastly, some new strategies and tactics for promoting *spatial publicness* in recent architectural practices, including those in China, are explored in two ways – politics and art, two forms of *dissensus*. In fact, the research tries to answer the following three questions:

- What is the public space (*spatial publicness*)?
- What is the public space (*spatial publicness*) in the context of Shanghai?
- What can architecture (urban design) do for public space (*spatial publicness*)?

All theoretical resources involved in the dissertation can be identified as three categories: the first one comes under the heading of public space, public sphere, or publicness; the second refers to the theory of space and the discourse on aesthetics and politics, *dissensus* and *consensus* (the distribution of the sensible); the third is mainly about the studies of social spaces in Shanghai and China. The three topics represented by them – publicness, spatialness, and locality – will converge on the main issue of the dissertation, namely, *Shanghai spatial publicness*. Their mutual relations can be illustrated by a triangular figure (**Figure 0.1**).¹

I The triangular illustration, reflecting the major theoretical resources of the dissertation, would be constructed on three major aspects: firstly, theories of publicness, in particular the theories of Hannah Arendt, Jürgen Habermas, Richard Sennett, Hans Paul Bahrdt; secondly,

Lefebvre’s theory of the production of space and Rancière’s discourses on aesthetics and politics; thirdly, theories of Shanghai social spaces – the classical research about Chinese social structure and urban space, especially about Shanghai.

0.1. The Triangular Illustration of the theoretical foundation.

Chapter 1 Meta-Spatial Publicness

The concept of public space is closely intricate and easily confusable with that of public sphere which is primarily concerned in political, philosophical, and social fields. Redolent with metaphysical and political elements, the public sphere is actually a kind of *meta-spatial publicness*. When *spatial publicness* or *public space* discussed, this *meta-spatial publicness* is an ineludible departure.

There are several key theories about *meta-spatial publicness* introduced in the chapter, including doctrines of Hannah Arendt, Jürgen Habermas, Richard Sennett, Hans Paul Bahrdt, and Rosalyn Deutsche. Among all of them, Arendt's definition of public realm as "two closely interrelated but not altogether identical phenomena" – *common world* and *public appearance* – is established as a keystone to navigate the slippery territory. Subsequently, the two essential facets of publicness will be replaced by two spatialized terminologies "distance" and "representation" in the next two chapters.

Chapter 2 Distance – Relation-Equilibrating

The concept of "distance" represents the mutual tension in-between social relationships in *spatial publicness*. Their equilibrium is maintained by the distance, which manifests itself in the three dimension of spatial production: the physical, mental, and social. The researches of Edward T. Hall, Richard Sennett, and Erving Goffman echo the fact that the success of public life relies on the existence of a set of distance regime. However, the decline of public life was also attributed to inflation of the codes – the institutionalization of distance regime, because the over-powerful regime would suffocate another aspect of *spatial publicness* – *meaning-presenting*. The metropolitan personality like "indifference", "reserve", and "aversion" described by Simmel is exactly an essential impediment to the birth of new meanings. And the spatial segregation lasting from the 18th century to the present day demonstrates a trend of institutionalization of collective distance too.

As an essential factor for production of *spatial publicness*, distance finds itself in a subtle balance between its institutionalization and disappearance.
